

Trinity College

Trinity Business Campus

- DECENTRALIZED HEATING COOLING MVHR TRENCH.

SCOPE & CHALLENGES

Trinity College needed to provide a safe working environment for the returning staff and students. Living with Covid, air quality is more important than ever and CO2 monitors help maintain clean air and reduce virus transmission.

We combined engineering with sustainability, providing trench heaters below floor level that heat, cool, ventilate and maintain CO2 at 1000 parts per million, without compromising on aesthetic or blocking the views through the perimeter glazing.

Project Team
