

OPW

Civic Offices Tipperary

- Mini Canal Trench Heaters
- Mini Free Standing Radiators

SCOPE & CHALLENGES

The challenge was to provide low energy heating that would coordinate seamlessly with aesthetic features in this 4,404m² building. The Versatile trench was chosen for its fast response time in comparison with underfloor heating, and its low-water heat exchanger allowing building performance to be optimised and benefiting from thermal heat gain from sunshine through the glazed perimeter. This unobtrusive system is finished with sleek aluminium grilles discreetly set underfoot, optimising space without obstructing the view.

Project Team

- Consultant Engineers: Arup
- Architect: Coady Partnership Architects
- Builders: Stewart Construction
- Contractor: T. Bourke Limited

- Project Size : 4,404m²
- Project Value : €13.5 Million
